

Standard Operating Procedure (SOP)

Sales Pipeline Flow - Trig Corp

This SOP defines the standardized, five-stage lifecycle that every B2B SaaS deal must progress through within Trig Corp's ecosystem. Strict adherence ensures accurate forecasting and compliance.

Pipeline Stages

Stage 1: Lead Ingestion

The initial entry point for all prospective clients. It is mandatory to capture and verify **BANT** data during this phase before moving the lead forward:

- **Budget:** Has the prospect allocated funds for this initiative?
- **Authority:** Are we speaking with the decision-maker?
- **Need:** What specific pain point does our SaaS resolve for them?
- **Timeline:** What is their expected implementation date?

Stage 2: Discovery & Intelligence

This stage focuses on augmenting the initial data profile. Account Executives must enrich lead data utilizing web search, corporate intelligence tools, and preliminary scoping calls to understand the prospect's tech stack and exact requirements.

Stage 3: Proposal Generation

Following successful discovery, a formal proposal and initial contract are drafted. The draft must be distributed internally via **Slack** for peer review and formally sent to the client via **Email** as a tracked attachment.

Stage 4: Negotiation & Policy Audit

Client negotiations occur here. Concurrently, the deal is submitted to the AI-assisted Policy Audit system to verify compliance with the Corporate Sales & Discount Policy (e.g., verifying that discounts do not exceed approved thresholds and checking the Restricted Competitor List).

Stage 5: Closed Won

Upon countersignature, the deal is finalized. The final step is updating the CRM system, initiating the customer onboarding sequence, and transitioning the account to the Customer Success team.
